
Google Holiday import? / Categories?

Posted by membersound - 2012/04/17 18:31

Hi,

just trying out Pro. Is there any chance to import default Google calendars like Holidays?
A default calendar already works. But I do not see any events in Rainlendar for holidays.

And what is more: can't the categories be synced to google?

Eg if I sync a birthday from my offline custom calendar, and it is resnyced from google back to Rainlendar, I loose the formatting of the birthday, and the event says:

<http://schemas.google.com/g/2005#event>

http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=3&id=16490#17026

according to this there is indeed a problem with google's default cals.

But what about the colors / categories for main custom calendar?
