
Savannah skin - pin or dot per event on each day?

Posted by munja - 2012/04/18 17:17

Hi,

is it possible to make the events be displayed as a dots or some other markers on the each day in the calendar view. For instance, if I have two events on today's date which are in different category, they are now displayed as a one color, I cannot get clue how many events do I have today. If they are displayed as two dots then I'll know there are two events today. I don't know if it is possible in Savannah skin? Is there any other skin that can do it?

Thank you!

Would like to know too.

If it's not possible, how difficult would it be to implement it?

Would be cool to have a little counter in the lower edge or such.

Shadow4 - Calendar and Chromophore - Calendar both can do it.

Only need go to : Options > Advanced > find session > change "Combine icons in the calendar" to "Show all icons"
