## Missing Day Events

Posted by lizmarr - 2012/04/19 14:19

---

I am using the beta, but this problem seems to be something I have done as it started with a beta that had been showing them.

Any of my calendars that have all-day events instead of ones at a particular time are not showing up in any view. They had been on April 1 (the last day I really paid attention) and I'm pretty sure they did not to long ago. I have just migrated from one PC to another but Rainlendar is still installed on the old one. This is the computer I have used nearly continuously for several years. I turned on Rainlendar and the day events are missing there as well. These are all Google calendars, but my main Google cal (which I enter things from my iPod) is working fine. But those are all entries with times, not all day.

What have I done to tell it to ignore all day events, or perhaps what has Google done?

I downloaded a holiday calendar from Apple and what I have checked is showing up.

Hi,

I have the same problem.

Suddenly, about a week ago, events from French Holidays from the google calendar are no more displayed in Rainlendar.

Thanks.

Rainy wrote:

The problem seems to be on the Google's side. The query for the events goes through successfully and Rainlendar gets the calendar's information but the result contains no events. This seems to affect only the public calendars (e.g. holiday calendars and such).

Maybe that's OP's problem, too.

Yeah,

It the same problem as in

[http://www.rainlendar.net/cms/index.php?option=com\\_kunena&Itemid=42&func=view&catid=3&id=11491](http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=3&id=11491)

or as in

[http://www.rainlendar.net/cms/index.php?option=com\\_kunena&Itemid=42&func=view&catid=3&id=11491](http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=3&id=11491)

---

I will wait for these to have a solution.  
Thanks a lot.

Sorry for the posts in bad thread.

Google seems to have fixed it.
