
Rainlendar sync Ms Project 2007

Posted by andu - 2012/04/23 21:10

Hey, I like to know is it possible somehow connect Rainlendar with Ms Project. It would be perfect this way. Rainlendar would be like desktop output for Project. for example all taks, milestones I can see it there and perfect if i can edit it as well.

If can somehow export the project's dates in iCalendar format you should be able to import them into Rainlendar. Quick Google search wasn't promising but perhaps there is a addon for MS Project which you could use.
