## gCal:"Contacts' birthdays and events" Doesn't Show

Posted by bugreporter - 2012/04/25 11:53

---

Google Calendar has a way to display birthdays and anniversaries of contacts from one's contact list. The calendar is called "Contacts' birthdays and events". In recent versions of Rainlendar it stopped showing, I tried deleting and readding it, I tried tick on/off various options (suspend errors, read only, etc.), but nothing works. It just doesn't show no matter what I do. And what's interesting is that there are NO error messages of any kind (it adds just fine as well).

Is there any way to trouble-shoot this? I mean, I want to find the reason for this, but if there are no EMs from Rainlendar, I don't see how can I do that.

I can confirm this.

Without changing anything at all, the birthday calendar refuses to show lately.

The birthday calendars got broken the same time as the holiday calendars:

[http://www.rainlendar.net/cms/index.php?option=com\\_kunena&Itemid=42&func=view&catid=3&id=16490#17026](http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=3&id=16490#17026)

Thank you, I did not see that post. Well then, the question is: is there anyone/any place we should write to in order for Google to become aware of this and fix it?

Also, my iPhone's calendar picks up the birthdays/anniversaries just fine. Any chance there is a way for Rainlendar to pick them up in another way (a workaround, so to say)? The thing is that Rainlendar showing me birthdays is NOT a small thing, to be honest. It's quite huge actually, and it's something that helps me a lot, simply because it's constantly on my desktop, so I never miss anything.

In other words, I would literally kill for a workaround on this.

But in any case I think we all should bug Google to fix it. And for this I need 2 things:

- Where to write (e.g. who or which place/department handles this)
  - What to write (a precise description of what Rainlendar needs/does and what happens or doesn't happen)
- =====

An easy workaround for this would be to use the Google's iCal link for a read-only access to the calendar but since that's not working either we can only wait and hope that Google fixes the problem. There is a post about the problem in the Google Calendar's discussion board (<https://groups.google.com/forum/#!topic/google-calendar-api/YBXJAUUdfGI>) and a bug report in the API issues (<http://code.google.com/a/google.com/p/apps-api-issues/issues/detail?id=3076&q=label%3AAPI-Calendar&colspec=API%20ID%20Type%20Status%20Priority%20Stars%20Opened%20Summary>).

Starting today the birthdays and events is finally back! Yay!!! :)
