
Google Calendar does not synchronize

Posted by moncoacp - 2012/04/30 17:45

My google calender does not synchronize. I have the latest pro version. I get the error message shown in the attached PDF. What is the problem and how do I cure it?

Same error here.

Online tasks (Google) are empty now.

I also have checked the option to keep an offline version.

BTW - the % completion option is not functional if i don't check the "keep offline copy"

I think Google doesn't like syncing and/or % of completion?

Hopefully this can be fixed (soon).

The "BadAuthentication" means that you have entered an incorrect password for your Google Account. Note that if you are using 2 factor authentication you need to create an application specific password for Rainlendar.

Google tasks don't support the "% completed". I'll disable that in the next build.
