## How to position the application on the desktop

Posted by gvm123 - 2012/05/08 04:04

---

Hi

Could you tell me how to position the application at a particular point on the desktop. It is currently right in the middle and i need it on the right bottom corner.

Thanks and hope to hear back soon !

Regards,  
Veni

Simply drag and drop? It should snap to the edges of the screen when dragging.

When I uncheck "Lock window in place" in Options, I am able to move it around and place it anywhere.

But when I click on another month in the calendar, it snaps back to the center of the desktop.

Is there any other setting I need to change to keep it always in a particular position?

If cannot keep the position, please: Right-Click > Options > Advanced > find "Save window position" and check it.
