
\\"On Desktop\\" bug in Debian wheezy GNOME 3.2

Posted by scai - 2012/05/15 16:29

In Debian testing (wheezy) with GNOME 3.2, when using either Rainlendar2 stable release (2.9) or the newest beta (2.10 b117), selecting the "On Desktop" window position option makes the rainlendar2 windows stick on the top of all other windows, i.e. behaved like "On Top" option.

I should mention that "On Bottom" option works as expected though.

I'm getting that exact behaviour since a long time. Always forgot to report it. It happens with the theme "savannah".

Yes, it works like that because I haven't found any other way to implement the feature (so that it would also work with most window managers).

In Openbox it does work!

-- Talking nonsense here... though Ubuntu 10.04 with openbox used to work with that theme activated, now in 12.04 it doesnt :side:
