
Google Kalender Synch Error

Posted by Reiyen - 2012/05/18 05:27

Hey Guys, I've been using Rainlendar now quite for a while and i decided to go pro. I have a desktop pc, a laptop and an iphone and want to synchronyze them all via Google calendar. i managed to sync the iphone and the laptop, but when i create a new google calender on my desktop pc and want to sync, i got the error in the picture

<http://www.rainlendar.net/cms/images/fbfiles/images/Rainlendar-fc4bea764d8975320cba1205fac3dae9.jpg>

i made exception for my firewall, i turned it off, i closed/deinstalled spybot, rebooted for several times, but its still not working

i am using windows vista 64 bit and i am sure that i used the right goole username and password. my internetconnection is stable (lan).

i hope you can help me with this issue.

thank you so far

The error means that Rainlendar is not able to connect to the Google's server which usually is caused by some networking problem or a 3rd party software blocking the connection. Some antivirus software can also block applications from connecting to the network so you should check that too.
