
Rainlendar 2.10 BETA build 118

Posted by Rainy - 2012/05/20 04:21

Build 118 can be downloaded from here:

Windows (32-bit): Rainlendar-2.10.b118-32bit.zip
Windows (64-bit): Rainlendar-2.10.b118-64bit.zip
Linux TAR (32-bit): Rainlendar-2.10.b118-i386.tar.bz2
Linux DEB (32-bit): rainlendar2-pro_2.10.b118-1_i386.deb
Linux TAR (64-bit): Rainlendar-2.10.b118-amd64.tar.bz2
Linux DEB (64-bit): rainlendar2-pro_2.10.b118-1_amd64.deb
Mac OS X (Intel): Rainlendar-2.10.b118.dmg

MD5SUMS-b118

The language template: rainlendar2.pot

This is beta version! It has not been tested.

Changes:

- o Added info text to the task editor which is shown in the recurrence tab if the due date is not set.
- o The info text also notifies if the alarm won't be shown because it is either ignored in the calendar or the skin lacks the alarm window.
- o Switching between events and tasks in the manager didn't update the menu items.
- o Changing relative start or end time on an event or task which didn't define the property moved the time to start of year 0.
- o Double click handler works in month view now too.
- o Process completed functionality is disabled for Google tasks.
- o Rainlendar_ReadFile() doesn't convert the text to lowercase anymore.
- o The window specific settings dialog can be opened from the windows submenu.
- o The snooze time can be relative to the target time (i.e. event's start or task's due time). Relative times can be defined with 'r' postfix (e.g. "10r").
- o Added few predefined choices for the time and date formats in the advanced options.
- o Updated the 3rd party libraries: curl, lua, openssl, zlib
- o Created a workaround for a crash problem which happened on 64-bit Kubuntu when the event or todo dialog was closed.

The Spanish localization is already updated in the Beta Releases.

Weather widget didn't work in b118 but in pre. b117

The widget show "Refreshing..." all time

<http://www.rainlendar.net/cms/images/fbfiles/images/pic-0e634dc9fedba046a3f3934b6f5b1fa1.jpg>

Addon ver. 1.6 (Added search widget.)

The Lua scripting language was updated to 5.2 in b118 and it seems that some of the functions have been renamed in the new version (gfind -> gmatch). I'll fix the scripts in the next build.

Re:Rainlendar 2.10 BETA build 118

Posted by Jorge_Luis - 2012/05/21 07:41

Is the lua update or the new working way of ReadFile? I have to update one of my skins to match the uppercase... which was what i want.

EDIT: Oh, yes, Rainy, you right...

Re:Rainlendar 2.10 BETA build 118

Posted by evanade - 2012/05/25 12:22

I have some localization problems:

1.

How to use "Type of year to add for categories"?

I know "ordinal" & "count" meaning but I don't know where to use it. Is it for recurrence categories like "birthday"?

Cause I change the setting and the birthday event show the same results ;(1);(2)

2.

What is the note "Repeat ending" in Change Fields meaning? Repeat the ending date?

3.

I need to know where I can find the strings bellow:

ItemListAlarm.cpp:452 "before target"

Resource.h 474 "Defines the width of the calendar list."

Resource.h 688 "Calendar day text color"

and Application\Resource.h 698 ~ 703

4.

Lost strings:

New "Search" addon's strings.

Thanks.

1. Yes. In the general section there is (in beta) a button to add the years in any category. If it's working right, you will see:

* Birthday, Birthday (1), Birthday (2), Birthday (3), ... (for count)

* Birthday, Birthday (1st), Birthday (2nd), Birthday (3rd), ... (for ordinal)

Of course, this only work for recurrent events.

2. Is the other way, the end of the recurrence, just like in the Events Dialog.

3. The "width of calendar list" is the tooltip for this option in "Shadow4 - Calendar List". The rest, I don't know. Looks like options for a window, but I can't see which one.

4. I don't understand this one. Where's the search addon?

I add one error: The option for calendar list width in Chromophore skin have a missing space, it's called "calendarlist_width" instead of "calendar_list_width" (the same in xml file), and cannot be localized.

"before target"

=> First of all, go Options...>>Advanced>>add a "Snooze times (mins)" like "5r" (note: must have "r"); then when alarm window popup, to select(change) the snooze time.

Application/Resource.h:688 and Application/Resource.h:698 ~ 703

=> Options...>>Skins>>Categories...>>any one of category's setting.

4. Yes, it's not been added. You can add following strings yourself:

msgid "Search"

msgid "Search engine"

msgid "Choose the search engine"

msgid "Enter search text"

@Jorge_Luis:

The "Search" addon is in Shadow4-Widgets.r2skin-addon, it's added on b117(see Changes.txt).

Re:Rainlendar 2.10 BETA build 118

Posted by Jorge_Luis - 2012/05/25 20:27

Oh, yes, now I see. I download the widget file but didn't install...

I use RL2 without alarms and those thing so I only look for specific changes. I didn't notice the "before target" until now...

Re:Rainlendar 2.10 BETA build 118

Posted by evanade - 2012/05/26 00:54

Thanks you all again.

Application/Resource.h:688 and Application/Resource.h:698 ~ 703 still use old string in b118, "color" v.s. "shadow color"

I can't understand "before target" function, I set "1r" to try it but the snooze act just like "1", maybe I misunderstand its meaning. :S

Re:Rainlendar 2.10 BETA build 118

Posted by Rainy - 2012/05/26 01:38

The snooze options are available in the menu if you right click the snooze button in the alarm window.

I know that, but I don't know the difference between a normal snooze and "before target" snooze.

Re:Rainlendar 2.10 BETA build 118

Posted by Rainy - 2012/05/26 01:47

If an event starts e.g. 12:00 and the alarm pops up at 11:00 a normal snooze for 1 minute would show the alarm again at 11:01. If you select the "before target" snooze for 1 minute the alarm would be shown 11:59 (i.e. one minute before the target time 12:00).

Re:Rainlendar 2.10 BETA build 118

Posted by evanade - 2012/05/26 01:58

Oh...

I tried it, but it not work, I select the "before target" but it show alarm again in 11:01 in your e.g.. Maybe this is a bug.

=====

Re:Rainlendar 2.10 BETA build 118

Posted by Rainy - 2012/05/26 02:25

Yes, there seems to be a bug. The new snooze time gets updated to the event but not to the alarm window so it will show it again after a minute. I'll fix that.

Re:Rainlendar 2.10 BETA build 118

Posted by Grouch - 2012/05/26 20:03

Rainy,

The GWeather widget is also not working. May be the same issue as with the Weather widget. When might you expect the next release with the Lua fixes?

Thanks,
Grouch

Re:Rainlendar 2.10 BETA build 118

Posted by Rainy - 2012/05/28 01:49

I updated the GWeather. The rest of the skins will be updated in the next beta which will probably be released in couple of weeks.

Re:Rainlendar 2.10 BETA build 118

Posted by he_the_great - 2012/06/03 13:32

This new beta is built with libc6 2.15 (2.14 may work as that is also listed, but I'm guessing you're building with the latest Ubuntu). Could you update the Deb to require this version. Debian is still on 2.13.

=====

Re:Rainlendar 2.10 BETA build 118

Posted by Rainy - 2012/06/04 08:55

Ok, I'll change the libc6 requirement to 2.15 in the next build.
