
calendar image does not show up

Posted by belas - 2012/05/22 13:16

I have been using the free version of Rainlendar2 for years.

A few days ago I noticed that my calendar image disappeared from my desktop, the icon is present. I cannot associate the disappearance with any event.

Uninstalled / downloaded / reinstalled current version. I still cannot get the calendar image displayed. Icon and empty EVENTS & TO DO fields do show up.

Double right click brings up window telling me that Rainlendar is running asking if I want to start another instance. Opting for yes, closes window with no other event.

I am running Windows 7 on an HP Entertainment Series Laptop for years.

Please help,
Bela

Right-click To-do window. Choose menu item Windows - have you accidentally unticked an item here?

Many thanks.
The "bug" was all mine.
