
Cannot see offline google calendar

Posted by Levy - 2012/05/26 08:14

Hi,
When I am online, rainlendar2 works perfectly well with my google calendar. For some reason it cannot load the offline copy when I am offline (I checked the box asking to keep a offline copy).
I always get the following error (see pic attached)
"Google error:
unable to authenticate to google. server returned result: (0) 0 unknown error."

Can you please help?? <http://www.rainlendar.net/cms/images/fbfiles/images/Rain2.png>

Forgot to add, I am using ubuntu 12.04 64 bit system, on a MSI fx603 laptop.
Plus, I am using a licensed product.

Try the latest beta version. If you still get the same error with it please run Rainlendar in the debug mode and send the log to the support email address with a link to this forum thread.

Meanwhile the beta version seemed to solve the problem.
Thank you very very much.
This app rocks.
