
Poll frequency to any number, NOT predefined

Posted by elastic - 2012/05/29 10:54

In earlier versions, you could set the poll frequency to any number you wanted. Now it's predefined. Why? I would like to have it set to 3 minutes, not the minumum of 15 minutes.

It was changed to limit the amount of traffic Rainlendar creates to the Google's servers. Google has added an access quota to their new calendar API so they are tracking how their services are used and I don't want Rainlendar to get throttled (or blocked) in case they decide that it accesses their server too often.
