## Windows Individual Settings

Posted by thjwong - 2007/01/11 23:39

---

Hi Rainy,

I suggest to let the settings of EACH windows be INDIVIDUALLY customizable:  
i.e. on top / always on top / transparency / hide on mouse over

Regards

That is because I want to have my digi-clock and to-do list to be always on top  
While the calendar and also the event windows are going to have some other properties

It is already possible but you need to edit the rainlendar2.ini file directly.

Can you tell me where is that rainlendar2.ini file? I can find the exe file and a rainlendar2.htb file in the directory only...

---

Oh...  
I closed rainlendar2 and then created an empty file rainlendar2.ini in the exe directory:  
I was asked if I want to import the individual ini files (e.g. todo.ini) when rainlendar2 starts, and turned out a lot of information is written onto the newly created rainlendar2.ini file

However, unfortunately... my network calendars settings, together will all the settings that I have configured are all lost altogether when rainlendar2 was started again after this ini file has been created...

Now I have deleted the ini file in fear... and restarted rainlendar2 to find the old settings together with my calendars have come back...

You can find it here:  
C:\Documents and Settings\<<USERNAME>\.rainlendar2\
