## Multiple Calendar support change in function

Posted by rjwilson01 - 2012/06/07 02:15

---

I have recently got a new computer - so I re-downloaded Rainlendar

I had version 2.6 Pro - I am now on 2.9 Pro

I appear to have succesfully imported my customsed skins but

One diffenence is that when editting calendar events I now get a drop down list for which calendar rather than a set of check boxes

Which means I can no longer put the event in multiple calenders. Specifically my Work Outlook and my personal Google

I think this is a deliberate change so I was tempted to put this in feature requests , but can I get the old behaviour back somehow? Or if not can I get the 2.6 installer?

Thanks

Welcome to the Forum, rjwilson01.

If you want to select multiple calendars, you can go: Options... >> Advanced >> find "Allow multiple calendars"(about at 14th item) and check it.
