## Cannot download Gcal data

Posted by Gwalchgywnn - 2012/06/07 14:42

---

Hi,

I have been having a problem for a while now where events from Rainlendar are uploaded to Gcal with no problems but I cannot download events from Gcal to Rainlendar. I receive the following error.

[http://www.rainlendar.net/cms/images/fbfiles/images/Rainlendar\\_error.jpg](http://www.rainlendar.net/cms/images/fbfiles/images/Rainlendar_error.jpg)

I am using the Pro version (obviously), version 2.9 (b111) 32 bit  
Thank you for your help!

Although I'm not use Gcal, but this maybe can help you:

[http://www.rainlendar.net/cms/index.php?option=com\\_kunena&Itemid=42&func=view&catid=3&id=16803](http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=3&id=16803)

Edit:  
Found after test, don't use "Past 6 months" or "Past year" as the values of "Import limit".  
Or, you can use the latest "BETA" version of rainlendar2, because that seems had fixed this problem.  
[http://www.rainlendar.net/cms/index.php?option=com\\_kunena&Itemid=42&func=view&catid=7&id=17211](http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=7&id=17211)

Thank you so much. I found that post this morning and changed all my import limits to everything. That stopped the errors, but after just reading your response I tried setting them all to Every 2 years and that seems to be working. So no errors and at least some limit on the amount of data that stored locally.

Thanks! :)
