
Graphics Quality on Window Resize

Posted by thjwong - 2007/01/11 23:43

I tried to resize some of the windows in the Shadow4 skin to make it larger, however, the graphics becomes so coarse (150%) that I think it totally lose the beauty upon being enlarged
However, on windows desktop, I have no idea on what graphics format to use so that the quality even after resizing can be retained...

The next version will use filtering in the resize operation which makes the scaled windows look much better.
