## Import single events

---

Is it just me on a Friday afternoon, or does import directly from a file not work, ie by right-clicking the event to open with Rainlendar?

It does work when I import directly from the Manager window.

ok [http://www.rainlendar.net/cms/components/com\\_joomlaboard/uploaded/images/ics\\_import.gif](http://www.rainlendar.net/cms/components/com_joomlaboard/uploaded/images/ics_import.gif)

At the moment it's not possible to import ics files from command line. The feature is in my todo list so it'll be implemented someday.

I wonder why it says "Desktop calendar" instead of Rainlendar...

Thanks. Good - then it isn't just me. Not a big problem. Wondered about the "Desktop calendar" too.
