
Exporting to CSV File

Posted by rpgbutcher - 2012/06/20 17:36

I do not know if this is a bug or not.

using latest beta build 119

Created an event for every thursday between 10.00 and 12.00 for 52 weeks.

I exported the events to a csv file and imported them into excel. I noticed the time changed when british summer time stopped (set 1 hour previous) and then when british summer time started the time reverted back to the original times.

Is this what it is meant to do or do I require to set something to compensate this

Yes, that's a bug. The recurrence is calculated in UTC so the DST doesn't get applied correctly. I'll fix it.
