Dock icon flickering on Mac OS X

Posted by eyebex - 2012/06/22 09:43

_____

Hi,

I'm running beta 119 using the Shadoew4 skin on Mac OS X 10.7.4. In Rainlendar's icon in the dock, the day number flickers every 2 - 5 seconds, which is quite distracting. It really seems to be only the number overlay that flickers, not the whole icon. Any chance to get this fixed?

Thanks!

_____

The icon might flicker when it is updated but that should happen only if the user actively does something with Rainlendar. Can you send me the Rainlendar's debug log? You can enable the debug log if you start Rainlendar from the Terminal like this:

/Applications/Rainlendar2-Pro.app/Contents/MacOS/Rainlendar2-Pro --debug

You can send the log to the Rainlendar's support address.

Hmm, right now I cannot reproduce the issue anymore. I will send a log if I can again. Where does the log get stored?

_____

The log is either in ~/.rainlendar2/rainlendar2.log or ~/.config/.rainlendar2/rainlendar2.log
