
Please add editing controls

Posted by rhino - 2012/07/01 03:09

You've already got ctrl left/right arrows, but commands like ctrl backspace for deleting last word, etc are still missing, and it gives funny characters instead.

This would bring it in line with other fields editing commands

Thanks,

=====

The edit controls are native to the operating system so they behave the same way as in any other application (e.g. on Mac and Linux deleting a word works fine since the OS provides the functionality). But I can see if it would be possible to improve the editing on Windows.

Thanks for the response. The cursor movement works, but other stuff like enhanced deleting doesn't.

Ctrl home , ctrl end : works

ctrl left and right arrows : works

shift left and right arrows : works

ctrl shift left and right arrows : works

ctrl delete : works

ctrl backspace (delete one word to the left) : doesn't work

So, just one issue here, all others seem to pass through into the editor,

thanks,

=====

Hi,

Also CTRL-A (select all) is missing in the editing textboxes.

Cheers,
