
Weather doesn't work fine

Posted by RMRubert - 2012/07/02 05:47

I just installed the 2.10 version and the shadow4 widgets and the weather doesn't work.

=====

Re: Weather doesn't work fine

Posted by Rainy - 2012/07/02 07:10

Can you tell what exactly happened when you installed the addon and enabled the weather window?

=====

Re: Weather doesn't work fine

Posted by RMRubert - 2012/07/02 08:46

Absolutely yes.

I install the 2.10 version of rainlendar.

The installer demands me to close rainlendar so I close.

I open the rainlendar and I see that the weather widget and text file disappear.

I download and install the widget from here: <http://www.rainlendar.net/download/b110/Shadow4-Widgets.r2skin-addon>

Now I see the text file widget and works perfect (now is Case sensitive (:) and the weather widget which only shows the updating... message.

I check the URL and it's the same I have got before, but never get the info.

The url I have now is that (I think is the default url):

<http://weather.msn.com/RSS.aspx?wealocations=wc:32669%26weadegreetype=C>

I also try to install the Gweather but doesn't appear on the options.

=====

Re:Weather doesn't work fine

Posted by Mirage - 2012/07/02 09:25

I have the exact same problem and also it seems my event calendar is now corrupted.

(I use google weather for my weather info)

Here's a couple of errors I found in my log....

I also noticed that after opening another Rainlendar window, I suddenly have a weather city and current temp, but nothing for the Hi/Lo daily forecast.

Here's a couple of errors I found in my log....

```
07:17:03: ERROR: Script download callback failed: :157: attempt to call field 'gfind' (a nil value)
```

```
07:17:04: Error: Failed to open 'F:\PortableApps\Rainlendar2\Glenn's Events.ics' for reading (error 21: the device is not ready.)
```

```
07:17:04: Error: Failed to retrieve file times for 'F:\PortableApps\Rainlendar2\Glenn's Events.ics' (error 21: the device is not ready.)
```

The 2 "Events.ics" errors repeat themselves several times in the log.

=====

Re:Weather doesn't work fine

Posted by Mirage - 2012/07/02 09:40

Got my events.ics to work by importing it again. We'll see what else I come up with.

About the widget of weather, Rainy wrote (in b119):
Some of the scripts got broken by the Lua 5.2 update.
I replaced the old weather widget in the Shadow4 addon with the GWeather.
The download link is :
<http://www.rainlendar.net/download/b119/Shadow4-Widgets.r2skin-addon>

Added:
I found a bug that the refresh time is always at 1970-01-01 00:00:00 +0000 (see image)
http://www.rainlendar.net/cms/images/fbfiles/images/2012_07_03_1.png

Re:Weather doesn't work fine

Posted by RMRubert - 2012/07/02 13:06

Thank you, I use the search option on the forum and I download the widgets from another post. Now everything works fine. Thank you.

Re:Weather doesn't work fine

Posted by Mirage - 2012/07/02 14:15

But in 119 the weather widget worked, in 120 it does not. Nothing else changed. Any ideas?

Re:Weather doesn't work fine

anoob wrote:

I found a bug that the refresh time is always at 1970-01-01 00:00:00 +0000 (see image)

These are 3 examples of the XML files generated for "Buenos+Aires", "Hong+Kong" and "New+York":
(<http://www.google.com/ig/api?weather=>)

Not sure if this is a Rainlenda bug.

Re:Weather doesn't work fine

Posted by anoob - 2012/07/02 19:25

Thanks you Jorge Luis. It seems that the error is at google, not at Rainlendar.
Added, when i reopen it now, it show me 2012-07-03 11:00:00 +0000, but the current time of my city is 2012-07-03 08:00.

Re:Weather doesn't work fine

Posted by Rainy - 2012/07/03 00:39

The "+0000" at the end means that the time is in UTC.

Re:Weather doesn't work fine

Posted by Muttley - 2012/07/05 00:07

I use the 64 Bit Version of Rainlendar2 with Windows 7 Ultimate 64 bit

With 64 bit Version Version Rainlendar-Lite-2.9-64bit.exe my weather widget based on StaticaColor-Weather skin worked perfectly

With 64 bit version Version Rainlendar-Lite-2.10-64bit.exe my weather widget based on StaticaColor-Weather skin fails to load the weather details and shows message Refreshing..... all the time.

I have checked the log file rainlendar2.log and the only difference I can find between Version 2.9 and 2.10 logs relating to the Weather Widget

BOTH Versions have the same line

Downloading: <http://weather.msn.com/RSS.aspx?wealocations=wc:THXX0008&weadegreetype=C>

BUT Version 2.10 has the following EXTRA Error line

11:20:27: ERROR: Script download callback failed: :92: attempt to call field 'gfind' (a nil value)

I am guessing this relates to the problem, but not being a programmer or script writer I am unable to investigate further or resolve myself

I have installed/uninstalled Versions 2.9 and 2.10 several times and always upon reverting back to 2.9 the weather works and always fails with 2.10.

Installation with BOTH versions has been faultless with identical habits, options and "Do you want to install Rainlendar for All Users" Window, to which I respond "Yes"

I have regretfully had to revert to using the older Version 2.9 as a functioning the Weather Widget is important to me.

Hope this information helps

Regards

Re:Weather doesn't work fine

Posted by anoob - 2012/07/05 02:08

@Muttley :

I think, because Statica-Color was a old skin, it used the old Lua 5.1 syntax.

But Some of the scripts got broken by the Lua 5.2 update

So i update the Statica-Color's weather to match Lua 5.2 syntax and make it as addon (StaticaColor-weather.r2skin-addon).

Installation : You only need to drag the file into Rainlendar's window and then drop it.

http://www.rainlendar.net/cms/images/fbfiles/files/StaticaColor_weather.zip

Hi anoob :)

Firstly, I apologize for not replying to your fast reply sooner. My post was one of the last Internet actions I was able to make before my, normally very reliable, Thailand ISP unexpectedly went down completely. Thankfully my ISP (3bb) engineers came out and fixed a problem down the road in under 1 day from my call to them. Hence why I am now able to respond to your post :)

I have installed 2.10 (64 bit) together with the update you kindly produced for my StaticaColor weather skin and I am delighted to advise the weather now loads and updates as perfectly as it did with previous versions.

Thanks ever so much anoob, not only for your work on a successful solution for me, but also for the speed in which you supplied it. I also really appreciated you advising me how to install the update which made it a "piece of cake" for me to implement.

Kind Regards and best wishes

=====

Re:Weather doesn't work fine

Posted by Delirium - 2012/07/11 10:15

Hello Together,

I do also having problems with since I've installed V2.10

With V2.9 my Statica-Weather works fine, but with V2.10 it doesn't refresh the weather for my locations.

So I downgraded to 2.9 again.

My URL for getting weather-data is:

<http://weather.msn.com/RSS.aspx?wealocations=wc:8175740&weadegreetype=C>

Since it has worked for long time, I assume, this should be not the reason for stopping weather-Updates in V2.10.

Could anyone help please, cause the disturbing info each time I start my computer "Update available" nerves a little.

I really love Rainlendar and want to take this chance to congratulate the developer for realizing this amazing App.

with kind regards from the biggest puddle of Germany

Posted by anoob - 2012/07/11 21:49

Welcome to the forum, Delirium.

Although I can fix your issue, but not sure which Statica you are using? So, I need the full-name of Statica, e.g. Shadow4 1.9

http://www.rainlendar.net/cms/images/fbfiles/images/2012_07_12_1.png

Having the exact same problem with Statica

Posted by akrabi - 2012/07/13 10:25

Hi there, I have the exact same problem as @Delirium.

I am using StaticaEN_HUD_Edit version 1.2.

Up until now I was using Rainlendar 2.9 and everything worked great including the Weather RSS feed.

But once I updated to Rainlendar 2.10 the skin loads but the weather RSS which gets the exact same URL gives "Download failed!" message.

Thanks for any help .

=====

Re:Weather doesn't work fine

Posted by Delirium - 2012/07/13 11:43

Hello,

thanks for your interest to help.

I am using Statica V1.4 in english
(949_Static_Weather-1)
I've tried Statica in german translation (mySkin_V1.4) as well, with same result.

With both Rainlendar V2.9 works fine, V2.10 won't upgrade the weather.

Meanwhile I've found in "settings" - "enlarged" (if this is the correct translation for the german word "erweitert") the ability to deactivate the Rainlendar-Update-Infos.
So it isn't a hard problem to me anymore.

But would be fine to find a solution to run Rainlendar in V2.10

With kind regards

Re:Weather doesn't work fine

Posted by anoob - 2012/07/13 12:23

Welcome to the forum, akrabi.
Because you provide the full name of Statica that you are using, so I can direct to find the skin-file, and make a addon (StaticaEN_HUD_Edit-weather.r2skin-addon) for it.

Installation : You only need to unzip and drag the file into Rainlendar's window and then drop it.
http://www.rainlendar.net/cms/images/fbfiles/files/StaticaEN_HUD_Edit_1_2_weather.zip

Re:Weather doesn't work fine

Posted by anoob - 2012/07/13 12:25

@Delirium:
I make a addon (949__Static__Weather.r2skin-addon), you can try it.

Note: Don't know why? but must close 949__Static__Weather before install addon.
http://www.rainlendar.net/cms/images/fbfiles/files/949__Static__Weather_addon.zip

Re:Weather doesn't work fine

Posted by Delirium - 2012/07/13 13:05

Hello Anoob,

thank you so much.
Now the Skin Statica that I am using with Rainlendar works with V2.10
But just after deinstall the complete Rainlendar and reinstall it, your addon has worked.
Just to select another skin and then install your addon has not worked.

But now everything is fine and I can activate the automatic Updatesearch again.

You're the best!!! :woohoo:

Re:Weather doesn't work fine

Posted by mgsfan - 2012/07/18 06:39

Also wanted to stop by and say thank you, anoob. Also using Statica 1.2 and now with Railendar 2.10 on my win7 x64 everything works nice, the addon now shows the weather ok.

Thank you ! :woohoo:

Re:Weather doesn't work fine

Posted by Jorge_Luis - 2012/07/18 08:22

There are several skins that use the old weather rss, is there a way to use a generic addon?

Both "Statica" and now the "Purple Rose" skin have the same code (and I suppose many of the skins of deviantART and customize.org)

Something like "download here a patch for every weather window which doesn't work?"

Yes... maybe depending if the problem comes from the 5.1-5.2 Lua's update...

EDIT: Now I see that "Statica Color" has changed the namespace? of the functions from Shadow4_ to StaticaColor_...

Re:Weather doesn't work fine

The city name "St. John's" is not displayed correctly.

http://www.rainlendar.net/cms/images/fbfiles/images/city_name.png

And is it possible to use English with celsius unit?

Re:Weather doesn't work fine

Posted by anoob - 2012/07/20 04:25

Welcome to the forum, cambi.

The city name "St. John's" is not displayed correctly. http://www.rainlendar.net/cms/images/fbfiles/images/city_name.png

Yes, because it forgot to decode the strings to UTF-8, you can install following addon (inside the zip file) which fix it :

http://www.rainlendar.net/cms/images/fbfiles/files/Shadow4_weather_fix1.zip

And is it possible to use English with celsius unit?

Try setting "weather language" as "en-gb".

Re:Weather doesn't work fine

Posted by evilroy - 2012/07/22 11:41

I am running Rainlendar Lite 2.1 with the StaticaEN_HUD_Edit-weather skin posted on this thread by anoob. I can't get weather window to work with certain cities--Manchester UK, Atlanta GA, Houston TX, Little Rock AR all work. But St. Louis MO (my city), Dallas TX, Memphis TN, Kansas City KS DO NOT work. By "not working" I mean the weather window just says "Refreshing...". I am getting codes from here:

<http://tiempo.ar.msn.com/local.aspx>

All I am changing in rainlendar is the city code--for instance this works:

<http://weather.msn.com/RSS.aspx?wealocations=wc:USAR0336%26weadegreetype=C> (Little Rock)

but this does not:

<http://weather.msn.com/RSS.aspx?wealocations=wc:USMO0787%26weadegreetype=C> (St. Louis)

http://www.rainlendar.net/cms/images/fbfiles/images/Snap_2012_07_22_at_11.png

Apart from moving to one of the cities that works, any ideas?

Welcome to the forum, cus08.

Are you replying to @evilroy? I only want to point to something:

But St. Louis MO (my city), Dallas TX, Memphis TN, Kansas City KS DO NOT work.

He was talking about Saint Louis, Missouri (USMO) and your link is from Saint Louis, Oklahoma (that's USOK).

The uk site doesn't show the temperatures because it uses "Lo ..." instead of "Lo: ..." and the parser can't find the values.

EDIT: I modify the addon from anoob to match some of the differences in the uk version. Now it should work with the previous link.

http://www.rainlendar.net/cms/images/fbfiles/files/StaticaEN_HUD_Edit_1_2_weather-6a5651f950cc451602889807fb454899.zip

Re:Weather doesn't work fine

Posted by mdl1966 - 2012/12/28 17:23

Hello -

I realize this thread is old, but I have only just discovered it.

I cannot get the weather to work with Rainlendar Lite 2.10 32-bit. I am using the StaticaEN_HUD_Edit version 1.2 skin. I live in Dallas, TX, USA, and the msn weather RSS feed for that city is weather.uk.msn.com/RSS.aspx?wealocations=wc:USTX0327&q=Dallas%2c+USA. (This also works on my browser when I take out the ".uk".)

I have installed the second add-on that was recommended in this thread (StaticaEN_HUD_Edit_1_2_weather-6a5651f950cc451602889807fb454899.zip). But I still cannot get the weather to update for my city. I'm including a screen shot of my settings, etc.

I've been looking at this "Refreshing" widget for months now and it's driving me crazy! I hope you folks can help. Thanks!

Re:Weather doesn't work fine

Posted by mdl1966 - 2012/12/29 09:37

Thanks for your quick reply, anoob!

I found several errors in my debugging log. Would you like me to show you the entire log, or just copy and paste the lines that have the error messages? Or do you think I should just re-install?

=====

Re:Weather doesn't work fine

Posted by anoob - 2012/12/29 10:27

You can first try re-install (even Rainlendar2) to see if that helps.
If it not, then you posted the error messages or send it to me.
(Preferably the entire log, but please to avoid sensitive information, such as: network accounts and password etc, if have.)
(And you can see my signature to find my email).

=====
