## Calendars - Format Options for Printing & Display

Posted by spikul - 2012/07/04 07:44

---

We tend to be visual folks and not text in or orientation. More printing options and viewing options would be great.

We are used to a typical graphical calendar with rows and columns. Being able to print that way would be awesome.

Visually, we need a way to make the boxes bigger so that we can see more tasks in the skin. I may have missed this somewhere. I haven't seen in any skin the ability to size the window to accommodate more lines of text per box.

My compliments to the developers. This is the first calendaring program that comes close to what I had on my Macintosh with Now-Up-To-Date. I have been looking for a replacement for their software for years. Thanks.

To change the windows' dimensions (at least for the default Shadow4 skin, it may depends on your skins), you need to right click -> options... -> skins -> advanced>>> -> "Shadow4 - Month View" (as an example) -> settings... -> window variables
