## Unable to install rainlendar in Debian wheezy

Posted by jerry - 2012/07/04 11:11

---

Rainlendar can not be installed in Debian wheezy due to it depends on libc6 2.15. The newest version of libc6 in Debian is 2.13. Please change the version requirement of the deb file to let it install in Debian.

The dependency comes from the latest Ubuntu which is used to build Rainlendar 2.10. You can try the \*.tar.bz2 version and see if that works with the older libc. If not you have to keep using the Rainlendar 2.9 until Debian gets updated.

Debian wheezy now is frozen. This means no major version update of packages. So the libc6 will not update until Debian wheezy becomes stable and it may take 6 months. At this time, all Debian user can not update Rainlendar to 2.10. Libc6 is an important library. Please condider to make new deb file for Debian users.
