Do I need to uninstall the old version before updating?

Official release version at Windows:

Close Rainlendar if it is running and run the installer again. The new version can be installed over the current version (official release version) so uninstallation is not required. Reinstallation does not affect your existing events or settings.

Important: If you are upgrading from 32bit version to a 64bit it is advised to uninstall the old 32bit version before installing the 64bit version.
