# Problem with Rainlendar v.2.10 64-Bit and Outlook

Posted by asrl - 2012/07/06 03:33

_____

My System is WIN 7 Prof 64 Bit (all updates are actual) with MS Office 2007 Prof (32 Bit with actual updates). After updating today to the latest version 2.10 of Rainlendar 64 Bit I got a message, that Rainlendar gets no connection to the Outlook-Mapi. The suggestion, to install a new connection to Outlook, didn't help - the problem remains. So I removed Rainlendar 64 Bit and installed Rainlendar v.2.10 32 Bit. This version works without any problems.
Best regards,
asrl

_____

If you have 32bit Outlook you must use 32bit Rainlendar. The error message mentions this.
