
Startup Error

Posted by KasaraEm13 - 2012/07/08 21:12

As I was adding a new event, my Rainlendar froze and stopped working when I hit the add event button. I didn't think much of it because other programs do this too, so I just did end process and clicked it again. But it won't come on now. I keep getting this:

<http://img811.imageshack.us/img811/3984/screenhunter01jul082101.jpg>

I first clicked use backup and choose one made at midnight this morning, then I tried reset, and finally I've tried uninstalling it, upgrading from 2.9 to 2.10, and restarting my computer, nothing's worked though. I can see its icon in my taskbar notification area for a moment, but I can't click on it and it goes away shortly.

What can I do to fix this? I've never had any problems with it before this, I don't think me adding another event ruined it, did it?

(I hope someone's still around here, hope this is in the right place.)

I fixed it. I ending up completely uninstalling it, that got it to come on, and then I put my calendar back in. Would like to avoid doing all that again though. :pinch:
