## Update messes with RSS

Posted by mgsfan - 2012/07/12 13:34

---

Hi, I just updated Railendar Lite with Rainlendar-Lite-2.10-64bit.exe and my old address

<http://weather.msn.com/RSS.aspx?wealocations=wc:MXDF0132&weadegreetype=C>

Doesn't work anymore, only see the weather window saying it is Refreshing... and no weather. Using again 2.8.1

I'm using a Statica skin

Thank you

-----

Using Win7 SP1 x64

Welcome to the forum, mgsfan.

This isn't a problem with the RSS as you say in the title. This is a problem from the Statica skin, which has nothing to do with Rainlendar because it doesn't belong to it, but it's from an user who create it. About the weather window, please see this post

Thank you for the answer, yes I'm new here, Railendar software has never failed me before, I'll check it up this weekend, would be nice to use the updated 2.10 version and be able to use the old statica skin, only weather failed >\_<

Thank you

Another user (anoob) was/is making weather addon updates for several mods of the Statica skin. In the post I comment you before there are 1 or 2 of them. See if one of them match yours.

Happy to report back, it worked, and very easily, also have Statica 1.2, so after installing Railendar 2.10 I double clicked on the weather addon, now it can display weather ok. Thank you very much.
