
Pending Mail in Outlook turn into Todolist

Posted by zyxfsky - 2012/07/14 09:52

I like Rainlendar very much, but i have a problem.

I use outlook to handle email. Sometimes, a mail is a pending things. I mark it as a task in outlook. But Rainlendar can't recognise this task. Rainlendar only can load normal task. But my most tasks are pending mails.

So I hope Rainlendar can support to recognise pending mail.

My English is so pool :(

Thanks.

The tagged emails don't actually go to the Outlook's task list which is the reason why Rainlendar doesn't show them. I'm not sure if it's possible to get the information from Outlook somehow but even if it would the problem is that you probably couldn't do anything with them since Rainlendar cannot edit emails.
