
Multiple calender windows - different months

Posted by Tigerduck - 2012/07/18 06:07

Hi!

I'm having a similar problem as described in this thread ("Multiple To-Do Lists"), but with multiple calender-windows.

I would like to have two windows, No.1 showing the current, No.2 the next month. When i try to change the settings of No.2 to "+1 month" and refresh, both windows are set two "+1 month", same with "0 month".

Maybe this problem relates to the other one.

(Win 7 SP1 / Rainlendar Pro, V. 2.10 (b120) 32 bit)

The link is wrong (missing : in http//), but yes, is the same problem.

There are actually two bugs related to this. If the skin settings dialog is opened from the options the changes are always saved over the first instance of a window. But if the settings dialog is opened from the context menu the changes are saved to the base window name (i.e. one without the ".N" at the end). I'll fix these in the next build.

You will have to wait to the next build or if you won't want to wait, there's a workaround. Follow the first steps:
http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=4&id=17497#17503

```
Show_adjacent_days=true  
Show_week_numbers=true  
Visible_month=0
```

...

Then change here (Search for Calendar.1, Calendar.2, ...) Visible_month=0 to Visible_month=-1 or +1.
