## Rainlendar focused in Unity

Posted by jpxsat - 2012/07/20 16:39

Hi Rainy:

There's a small weird behaviour when running Rainlendar under Unity:

- at startup, Rainlendar is focused (the up bar says "Rainlendar2" instead of "Ubuntu Desktop"). Just clicking on the desktop stop this, but I think it's not expected.
- after minimizig any window, and you expect to see your desktop: the desktop is shown but it says "Rainlendar2" instead of "Ubuntu desktop"...

Rainlendar is my only extra app running at startup in ubuntu 12.04

It's maybe small, but still I don't think this is expected.

If it's not a bug from Rainlendar, do you have at least a hack to avoid this? It whould be very nice of you :)

This happens to me in a lot of machines (at least the 5 I own), so I don't think it's just me that's experiencing it...

I disqualify myself for this bug... it's actually a problem within Unity.

Sorry
