## Tray icon doesn't change when day changes

Posted by Bluestar - 2012/07/25 18:34

---

Dear Rainlendar Dev Team,

I just noticed that Rainlendar's tray icon "forgets" to change to the actual date after midnight (see the example below, atm it should show "26", but instead it keeps showing the original date "25", which was the true when the program has been started, but not now).

Screenshot:

<http://img515.imageshack.us/img515/4999/sshot1zp.png>

SW: Rainlendar 2.10 b120 (32bit)

OS: Win7SP1 (32bit)

Any hope that this issue will be fixed / should i change some option in the Configuration dialog?

Best regards,  
Bluestar

Welcome to the forum, Bluestar.

This bug (?) appears some time ago, but it's just a specific problem, I mean, it can't be traced to all PCs.

@Jorge\_Luis: Thanks for your quick response & welcome. :)

Oh, so it's a known issue since many years... i guess theres not so much chance for it to be fixed then.

The interesting thing is even if i right click on Rainlendar's tray icon, and choose the "Refresh" item, it refreshes the Rainlendar-related things on the desktop as it should, but the tray icon keeps showing the false date, instead of a "refreshed" one...

Is refreshing the tray icon implemented regarding the click event on "Refresh" popup item, or it doesn't affects it at the moment?

One more info: if i remember right, i was running a fullscreen application before the clock turned midnight (namely OpenLieroX)... unfortunately i don't know what kind of rendering it uses, but definitely not OpenGL - though i'm not sure if it has something to do with the issue or not...

Best regards,  
Bluestar

Win XP SP 2.

I am a recent user. I ran into this problem immediately. I hibernate my machine every night, before midnight, so it is in hibernation when the date changes. It changes the date in the tray icon some of the time, but after a few days it does not change it.

As has been mentioned, the only way to change the date seems to be to exit the program and restart it. Not a big deal, but in the morning I want to look at the tray and see the date with confidence.

Let me take the opportunity to thank everyone who contributes to this great program.

Best Wishes, Bob

I've managed to reproduce the issue in one laptop so I've been able to look into this some more. The problem is that for some reason Windows just stops updating the tray icon after the computer wakes up from sleep. No matter what I do the icon will not get updated. During the refresh Rainlendar will remove the icon and create a new one but that does not help. I even tried to remove the icon just before the computer is suspended and adding it back after resume but that didn't help either. Even if Rainlendar is closed the icon will still stay in the tray until the mouse is hovered over it which will cause a forced update.

So, this looks like some weird bug either in the framework library I'm using or in Windows for which I have not found any workarounds.

Bluestar,

I am having the same problem. This started happening about a month ago as well. I see your in a similiar situation. Have you been able to figure anything out? I am at a loss as of now. The only way I can get it to work is to exit program and restart Rainlender.

Regards,  
T

I went for nearly a month when it happened again on 27th. I restarted and it happened again on the 30th, where it sits now. (I notice that the icons on the categories are still on 29.) Once it stops updating it does not restart. I have not been able to figure out what circumstances cause it. I hibernate every day, sometimes more than once. I rarely use full screen and have not recently.

Still happening using latest version (v2.11 (b128) 32 bit)...

[http://s7.postimage.org/4z1mmjfy3/sshot\\_1.png](http://s7.postimage.org/4z1mmjfy3/sshot_1.png)

Any chance that this bug gets fixed someday? :(

Nowadays I can reproduce the issue day-by-day, Rainlendar just never switches to the next day at 00:00 as it should... Clicking on "Refresh" makes no sense, nothing happens at all - the only way to make it show the correct day's icon is to exit & restart the app.

OS: Win7SP1 (32bit)

As far as I can tell this is it a problem in the tray. In certain situation it just stops listening updates from the application so it's not possible to change the icon. Even if the application is closed the icon remains in the tray which should never happen.
