## Facebook sync not working

Posted by Snoggi - 2012/07/28 09:04

---

Hi,

I'm using Rainlendar Pro and succesfully connected my Google Calender.

Now I tried to use my Facebook Event-Calendar as well. Using the webcal-link, I don't get an error on Rainlendar but it's not showing my events. The calendar is enabled.  
Same happens if I go through Google calender and insert the Facebook events there - also no new events on Rainlendar.

Can anyone help me out here?

=====

Can you run Rainlendar in the debug mode and send the debug log file to the support address? I can check from it what exactly Rainlendar gets from the Facebook's server.

I have the same problem. The Facebook event appears in the manager, but does not appear on the calendar (with a visual category set up for the Facebook calendar).

Found the solution to this:

Right click the calendar -> Windows -> Settings -> Large Calendar (or the regular calendar if you're using that) -> add missing calendar to 'included calendars'
