## ModdedSavanna skin rendering errors

Posted by emueyes - 2012/07/29 04:33

---

Hi all

I've been using a ModdedSavanna skin for quite some time now, with a lot of its colours changed to more pastel shades .

It has recently started mis-rendering, most noticeably in overwriting the bottom part of the dates, and in using odd sizes for appointments, for example covering the whole day when it is just a half day appointment.

This is probably due to my heavy handed editing, I imagine, but it has only just started, with no event related to it that I can think of. Could someone recommend a Savanna - like skin that's prebuilt to save me the work? I know this sounds lazy, it is, but at the moment I have too much to actually do, and too little time for editing calendars keeping track of what I have to do. The overall look of the screenshot is what I was trying to achieve; minimalist, pastel colours, plain fonts.

Thanks
