## Toodledo Error

Posted by Rayen - 2012/08/01 07:57

---

I want to use Toodledo sync, but i get this error.

Toodledo Error

Call "account/lookup.php" failed : Empty email.

I checked my email and password,  
and have no problem with website or other apps.

Can you send the Rainlendar's debug log to the support address. Please also link to this forum thread so I know why it was sent.

---

I looked up log file and figured it out myself.  
The problem was my password include '#'  
it seems if address has '#', server dosen't recognize address after '#'.

I changed toodledo password and it works fine.

Thanks for finding and posting this error. I am in the process of switching from RTM to Toodledo and just had the same error. I'm synching Toodledo with other apps (Android, Google, ext) and am using a # in the password...seem Rainlendar is the only program having the url/address issue.

Bug ???

Thanks

- John
