hi, i update to 2.10 yesterday and today i found that weather broken. yesterday it worked i guess.  
i use that skin <http://customize.org/rainlendar/skins/63524>  
there are default string:  
<http://weather.msn.com/RSS.aspx?wealocations=wc:UKXX0092%26weadegreetype=C>  
and i see this window:  
<http://img195.imageshack.us/img195/4834/screenshot7wix.jpg>  
i think may be rss or whole path outdated? how can i fix that?

Welcome to the forum, sergentum.  
Please see the previous post and download the file I posted.

The solution posted by anoob is the right solution. The skin doesn't work because an update on the programming language version used by Rainlendar.

Here's the right post where anoob submit the "patch":  
[http://www.rainlendar.net/cms/index.php?option=com\\_kunena&Itemid=42&func=view&catid=4&id=17388&limit=6&limitstart=18#17480](http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=4&id=17388&limit=6&limitstart=18#17480)  
and this is the direct link to the file:  
[http://www.rainlendar.net/cms/images/fbfiles/files/StaticaEN\\_HUD\\_Edit\\_1\\_2\\_weather.zip](http://www.rainlendar.net/cms/images/fbfiles/files/StaticaEN_HUD_Edit_1_2_weather.zip)

And, as he said, you only need to unzip and drag the file into Rainlendar's window and then drop it.
