## app for rainlendar for ipod / ipad / etc.

Posted by wii - 2012/08/17 21:37

---

It would be really nice if there was an app so I could put the Rainlendar that I purchased onto my Ipod and Ipad. I've purchased the Rainlendar Pro for windows 7, but would really like to also use it for my ipod / ipad as well.

Same here!

I search every month on Google Playstore for an Rainlendar-App.  
I'm already using rainlander on PC and via Google-Calendarsync on my smartphone.  
But compared to Rainlander my Smartphone-App looks crappy!

I searched awhile for an app that was (not good but at least) acceptable. I'm now using acalendar+, but it is no RAINLENDAR!  
No Event-Icons and if I want to use different colors for different events, I have to edit the events in Google-Calendar.

I know that there are some calendar-apps, where you can set different colors directly on the smartphone (like Jorte), but they look very ugly and confusing. They all make the mistake to place the icon AND the Event-Name on the month view, which makes the month view very unclear.

I'm really looking forward for an calendar app that looks like the well-arranged month view from rainlander:  
- with its event-icons,  
- mouseover-Effect (to see Event name or additional infos) => well lets say: Touch-Over-Effect

And I know that I'm not the only one.  
So come on guys! :D
