
Chrome Icon theme for ubuntu

Posted by J.One - 2012/08/18 04:26

Is it possible to add a "chrome icon theme" for ubuntu systems so Rainlendar blends in with the rest of the icons in the ubuntu menu bar?

I added a screenshot to show what I mean. http://www.rainlendar.net/cms/images/fbfiles/images/Selection_001.jpg

Most likely possible but I'll have to check how much work that would require.
