## Password

---

It would be great to have a password to change your options, events and tasks and alarms?

I want to give a secure password encryption with over 64 Bits!

It can be possible?

I guess it could be possible but I'm not sure why you would need this kind of feature. Are you sharing your computer's user account with someone else?

yes all my family coming to my PC, and if you can block access to options, events and tasks and alarms... for there is no change!

best is a password to keep out the changes!

reading dates not pose a problem for me, but rather after the change and save!

I think not be alone in wanting to block all changes in my Rainlendar !?

:blush:

I think the normal solution for this kind of situation is to create different user accounts for each family member. This isn't specific to Rainlendar since you are basically sharing all the local data on your computer (e.g. emails and even the passwords which are stored to the browser).

using one account, a matter of facilitate...

"Password" this is just a suggestion !
