---

Can we populate the default calendar with recognized U.S. holidays? :unsure:

No and Yes.

There is more easy to download another calendar with the US holidays (e.g.:

<http://www.mozilla.org/projects/calendar/caldata/USHolidays.ics>) and add it to Rainlendar.

Why I said Yes? Because you can move all the events from this calendar to the default one... but there is no difference adding another calendar (unless you want all in one).
