## Setting default event length

Posted by LM7 - 2012/08/27 01:06

---

I have Rainlendar configured to display (in Day View) intervals of 15 minutes by default, but if I double-click on any of these intervals to schedule an event, the length of the scheduled event is an hour.

Is there any way to set things so the default length of the event will be 15 minutes?

Thanks!

Yes, the default is one hour, and can not change.

The workaround is go : Options... >> Advanced >> find "Time span in the editor", and change the values to "15" (Default is "60").
