## Rainlendar 2.11 BETA build 123

Posted by Rainy - 2012/09/02 09:25

---

Build 123 can be downloaded from here:

Windows (32-bit): Rainlendar-2.11.b123-32bit.zip  
Windows (64-bit): Rainlendar-2.11.b123-64bit.zip  
Linux TAR (32-bit): Rainlendar-2.11.b123-i386.tar.bz2  
Linux DEB (32-bit): rainlendar2-pro\_2.11.b123-1\_i386.deb  
Linux TAR (64-bit): Rainlendar-2.11.b123-amd64.tar.bz2  
Linux DEB (64-bit): rainlendar2-pro\_2.11.b123-1\_amd64.deb  
Mac OS X (Intel): Rainlendar-2.11.b123.dmg

MD5SUMS-b123

The widget addon: Shadow4-Widgets.r2skin-addon

This is beta version! It has not been tested.

Changes:

- o Dragging items in the schedule caused a crash.
- o Changed the password encoding to use the operating system services.
- o The MAPI connection to Outlook is closed when the calendar is disabled.
- o Added optional app indicator icon for Linux.
- o Rainlendar\_ShowMenu() required that submenu was wrapped inside a table.
- o The week for the past dates was calculated from the start of the week insted from the end of it.
- o Some menu items were twice in the task editor.
- o The calendar must be selected in the new calendar wizard before proceeding.
- o Deleting a single instance from a recurring event caused duplicate exception days to be created into Google calendar.

First, this isn't a bug, but it's a thing that annoys me sometimes.

If I have two Shadow4.r2skin files (one from app folder and the other user folder) then Rainlendar loads the newest one. Maybe the one from user folder could not be updated, but it could have addons installed.

I had to change the date from one of them after compare if inner files needs to be updated, and then refresh.

Maybe loading first the one from user folder isn't the best solution.

Not sure if merging could replace edited files.

What about some kind of sign? Something like "There is a new version of Shadow4/Chromopore/Savannah skin. Do you want to update it? (You will have to reinstall addons)"

=====

## Re:Rainlendar 2.11 BETA build 123

Posted by senior\_spielbergo - 2012/09/03 14:39

Hi,

I've got an error when starting 2.11 BETA build 123:  
"rainlendar: error while loading shared libraries: libappindicator.so.1: cannot open shared object file: No such file or directory".  
I'm running rainlendar on Arch Linux.

Thanks for any hints on this.  
David

## Re:Rainlendar 2.11 BETA build 123

Posted by mfs - 2012/09/04 08:26

Hi senior\_spielbergo,

I was having the same problem and was able to solve it by installing libappindicator from the AUR. I've already suggested to add the new dependency to rainlendar-beta-unstable's depends on the corresponding AUR page.

EDIT: If you run into problems installing the package (as I did) due to a problem with different perl versions (5.14 vs 5.16), try moving /usr/lib/perl5/site\_perl to another place.

Cheers,  
mfs

Hi mfs,

---

thanks for that hint. This fixed my problem too.

Kind regards,  
David

I'm the Arch maintainer, and the fact that this is a hard dependency is quite annoying really. Rainy, any chance to make it optional, not everyone uses Unity...

Hi,

Upgrading from 2.10.119 beta to latest.

I have a custom xml skin that uses Segoe Print as the font. Upgrading to latest version my font is not displayed instead I get Segoe UI I think. The Skin is unzipped. I assume a .r2skin is just a renamed zip file? If so zipped version of my skin shows the same behavior.

Regards,  
niche99

There are just few functions that are needed from the app indicator library so I think it would be possible to load it dynamically. I'll check that.

I have "WARNING" in rainlendar2.log

The error means that there are exception days (e.g. deleted instances of a recurring events) in the feed but the original event is missing. I'm not really sure what could have caused this.

o Changed the password encoding to use the operating system services.  
explains ?

The change means that instead of encoding the passwords with a proprietary algorithm Rainlendar now uses the operating system's crypto library to do it. So, it's more secure.

get Segoe UI I think.  
There seems to have been some changes in the framework how the fonts are created. I'll check that.

OK Rainy

"Options Skin details" if you can put "Escape Sequence" in the comment skins to change his line ...

Newline: \n

skin.xml e.g.

The skin contains multiple different color variations...\n

\n

\*\*\* MOD of the "Chromophore v1.2 Rainy" \*\*\*\n

\n

...

Thx

---

## Re:Rainlendar 2.11 BETA build 123

Posted by Rainy - 2012/09/13 09:16

---

Yes, I can add support for the newlines in the skin comment.

---

## Re:Rainlendar 2.11 BETA build 123

last betas are more buggy than usual. here are some found bugs:

1. this bug is on russian locale. when i open 'settings', 2 error windows are up.

<https://dl.dropbox.com/u/8057990/1.png>

<https://dl.dropbox.com/u/8057990/2.png>

if i chose 'no', after those 2 error messages settings window will appear.

2. this bug is found in english locale. all categories are shown as circle signs on calendar.

<https://dl.dropbox.com/u/8057990/3.png>

using Win7x64. rainlendar 2.11.123

---

## Re:Rainlendar 2.11 BETA build 123

Posted by VladimirV - 2012/09/14 05:27

---

Yes. this if language is not English.

---

## Re:Rainlendar 2.11 BETA build 123

---

one more bug revealed.

added some events, but after restart when i try to open manager, i see a couple of error messages like this:

<https://dl.dropbox.com/u/8057990/4.png>

when i finally open manager window, some of my events look strange like this:

<https://dl.dropbox.com/u/8057990/5.png>

if i open one of those corrupted events, it looks normal:

<https://dl.dropbox.com/u/8057990/6.png>

hope you'll fix it

You actually shouldn't see those assert dialogs. I'll have to check why they are still visible.

1. this bug is on russian locale. when i open 'settings', 2 error windows are up.

The error is in the translation. Some of the different English texts are translated into the same Russian text which causes the problem with the grid control. I would appreciate if someone who understands Russian would go through the advanced page in the options and fix the duplicate texts in it.

2. this bug is found in english locale. all categories are shown as circle signs on calendar.

Did you enter the categories in Russian? If you change the language Rainlendar cannot match the category names anymore so you'll just get the default category icon. You can enable Options->Advanced->"Store English category names" if you need to use different language versions.

added some events, but after restart when i try to open manager, i see a couple of error messages like this:

The date formatting in the framework library doesn't seem to like the '#'-char for some dates. I'll see if this can be fixed.

tell me how I can change the name of a value, or You can use this text for one of those problem values ">:07K20BL <5AB>".

p.s.: oops, seems to me no cyrillic text allowed in this forum...

=====

## Re:Rainlendar 2.11 BETA build 123

Posted by Rainy - 2012/09/16 10:13

---

I removed the last word from the duplicate texts and updated the language to the download page. Hopefully it's still understandable :-)

dixcub wrote:

one more problem - I can't hide "next week" in events list. parameter doesn't work.

The parameter of events list in Chromophore skin, it's only control the right side of header string.

Want to change the left side of header string, can go:

Options... > Advanced > "Event List" segment > change the value of "Event list header format".
