
Alarm cannot be discarded, but reappears instead

Posted by Dennis - 2012/09/16 17:38

Hi,

in case I have an all day event like e.g. a birthday it pops up at 11:45 pm but in case I try to discard the alarm it simple re-appears.

This is true even some time after midnight. I can confirm that the alarm will reappear at 0:30 am and most probably will always reappear until 1:00 am (last fact yet unproven).

Regards
Dennis

Does this happen with native Rainlendar's events or is the event stored to some 3rd party calendar? Can you run Rainlendar in the debug mode while you try to dismiss such alarm? Please send the log to the Rainlendar's support address with link to this forum thread.
