## How to view events of future date in event list?

Posted by fairhaven73 - 2012/09/19 21:07

---

Hi Guys,

I searched the forum, but couldn't find the answer to this.

How can I view the events or to-do's of future day in the event and to-do list?

My event and to-do list is set to show today's(1 day) items only. And I want it that way.

But, when I try to click on any other date in calendar, it just shows a popup in calendar. Nothing in the event list or to-do list.

How can I make all other dates clickable, so that when I click them, I can see the events and to-do's in respective lists.

I'm using default skin.

Also, I'm able to do a custom sort in to-do list. Is it possible to even sort the events.

Any help would be appreciated. Thanks.

Welcome to the forum, fairhaven73.

I think the functions you want both of which is not possible in current, unless for the functions you want to create new skins.

Thanks!

I'll go over the skin creations tutorials.

Also, is there a place where I can pay to have this created?
