## Default mouse focus on \'search\' requested

Posted by rhino - 2012/09/23 22:36

---

When opening 'manager' , text entry focus should be by default on 'search' text box, because you'll be typing there anyhow, and right now it's an extra wasted mouse click.  
not a major feature but a nice usability addition. After all, most RL users are power users and we love keyboard, right?

I guess that's the logical place for the initial focus. I'll change it.

Hello,

as far as I can see, it isn't implemented, yet. I would appreciate this very much, though.

I use the manager quite often using keyboard, then click with the mouse in the search field and go on typing with the keyboard. Unfortunately it disrupts the work-flow quite unpleasantly.

I'm using latest beta (PRO v 2.13, b142, 64 bit, Windows 7) and it's not happening. Did I miss something?

Thanks!

The code is there but it doesn't seem to work at the moment. I'll check it.

Is this implemented already? Can't get it to work. Really looking forward to it. Thanks!

Yes, but it has not been released yet.

Thanks! It's working for me in the latest Rainlendar 2.13 BETA build 143!
