## Rainlendar 2.11 BETA build 124

Posted by Rainy - 2012/09/30 08:29

---

Build 124 can be downloaded from here:

Windows (32-bit): Rainlendar-2.11.b124-32bit.zip  
Windows (64-bit): Rainlendar-2.11.b124-64bit.zip  
Linux TAR (32-bit): Rainlendar-2.11.b124-i386.tar.bz2  
Linux DEB (32-bit): rainlendar2-pro\_2.11.b124-1\_i386.deb  
Linux TAR (64-bit): Rainlendar-2.11.b124-amd64.tar.bz2  
Linux DEB (64-bit): rainlendar2-pro\_2.11.b124-1\_amd64.deb  
Mac OS X (Intel): Rainlendar-2.11.b124.dmg

MD5SUMS-b124

The widget addon: Shadow4-Widgets.r2skin-addon

This is beta version! It has not been tested.

Changes:

- o New completely rewritten manager dialog.
- o Fonts in skins didn't work on Windows.
- o The skin comment can contain newlines ("\n")
- o Added the name of the translator to the about dialog.
- o The submenus can be again wrapped inside a table for Rainlendar\_ShowMenu() so that their position can be defined.
- o Fixed division by zero error if the all day event area height was set to 0.
- o Removed hard dependency to the appindicator library on Linux.
- o Re-enabled the description field for Remember the Milk tasks.

When I see the new Manager the only thing I could say was: WOW! It's outstanding! :woohoo: It's a really nice change. :cheer:

Now, what I saw:

\* Inccorrent behaviour in the search box

- 1) Search any text inside an item (e.g. calendar name)
- 2) Click on a item in the list
- 3) Click again on the search box
- 4) Press the Del key. Rainlendar tries to delete the selected item.

\* The tooltip appears too fast. Also, it only shows me the first page, I means, when I scroll the list, it still shows me the first items in the list according to the mouse position on the screen (?).

\* An assert for something like "out on range selection" (uiIndex < m\_nCount) when freeing memory. I suppose a variable is keeping a value greater than the number of items in the list. Maybe related with the tooltip bug?

P.S.: \* I saw my name in the About dialog!!! :P

Report a bug, this bug has happened from b121.

Because it does not affect my use, and I'm not sure what making it happen, so has not reflect.

Now, I realised that what making it happen.

Example: if Rainlendar's path exist double-charset (eg. Chinese-word, img 1), when I want to view "About", I will got a error dialog (img 2).

This and the previous version does not want to start-up automatically with windows 8 even with the administrative privileges, even though in the options menu in general tab, its checked to enable on startup.

---

@nale:

Rainlendar2 can start-up automatically on my windows 8, so maybe you made some thing wrong, like copy ini into Win8 directly.

To fix it, you can try:

# Run Rainlendar2 with administrator.

# Enter the "Options", unchecked "Enable on startup", and click "OK" to exit. (This action will clear the wrong setting)

# Re-enter the "Options", checked "Enable on startup", and click "OK" to exit. (This action will set a new setting)

Hope this can help you.

\* Inccornt behaviour in the search box

The delete key handler is in incorrect place so it gets triggered no matter where the focus is. I'll fix this.

\* The tooltip appears too fast.

The tooltip caused a lot of problems for me. I'll see if I can still do something about it.

\* An assert for something like "out on range selection" (uiIndex < m\_nCount) when freeing memory.

Happens at least if you move your mouse from the list to the top of the dialog before the tooltip appears. I'll fix that.

if Rainlendar's path exist double-charset (eg. Chinese-word, img 1), when I want to view "About", I will got a error dialog (img 2)

I don't seem to be able to get rid of these damn assert dialogs. Anyway, I'll fix this in the next build.

I also noticed that the "Show upcoming" doesn't check the end date for the recurring events so you'll see events which have been long gone. I'll fix that too.

Oooh, with the new organize window times became harder. It looks good, but I cannot do what I did before:

1. I sorted by category
2. Selected all items of one category
3. Did changes

E.g., I wanted to make all EEvents "private", from the category "Birthday", because I upload my stuff to a public web calendar.

**SORTING** is missing!

Additionally, the dialog usually crashes Rainlendar x64. Wxwidgets error, I will report later...

Anyway thanks, it looks good.

This build, like the previous build 123, always crashes / stops responding for me when restarting my Mac while Rainlendar is running. I'm using Mac OS X 10.7.5. Probably related to the wxWidgets update?

You can search for the category name. At least it will reduce the items in the list. This will work unless you've another event with "Birthday" in any place but not from that category.

EDIT: I miss that option too, but I hope it will reappears soon.

I'll add category specific filtering in the next build so you'll be able to just click one of the categories in the list and you'll see only the items which belong to the category.

I'm not sure what has changed but the reason probably is that Rainlendar is not handling the Quit command that the OS sends on shutdown. I'll try to fix that.

Rainlendar cannot handle Windows settings with zoom. On my Notebook (Win7), OS is set to 125% zoom view. In that case, you cannot see all radio buttons in the "Create calendar" window - "MS Outlook" is the last I can see.

Did you change the DPI setting or increased just the font size? If you need bigger fonts in Windows you should do that by increasing the DPI since that will also affect the size of the dialogs.

This:

<http://www.abload.de/thumb/zwischenablage-11wplc.png>

In Rainlendar it looks like this:

<http://www.abload.de/thumb/zwischenablage-1f8q7a.png>

It's a Lenovo Notebook with a 16:10 / 1920x1200 resolution.

It seems to work differently in XP and 7. I'll see if the dialog's size could be increased when the font is larger.
