
MSN Weather Not Working?

Posted by someguy9 - 2012/10/07 17:17

I've been using the MSN Weather feed for Rainlendar, but this morning it seemed to stop working. It's stuck on "Refreshing."

Is anybody else having this problem?

MSN is probably closing down the feeds since they are not available from their website anymore. You can enter the feed's url to your browser and see if you get any content from the server.

I did enter the feed on Sunday, but got a blank page. Oddly enough, today the weather on my Rainlendar started working again. I didn't edit a thing. Oh well. I'm not complaining.
