
Notifications don't appear in Google Calendar

Posted by capturable - 2012/10/11 00:36

Hi,

is that a bug in the latest Beta? My calendars are Google Calendar based. If I add a notification (e.g., E-Mail) in Rainlendar, this is not applied on the Google Calendar website. The event definitely gets uploaded, because changes to the description are applied for instance...

EDIT: Hmm, now it works, maybe my testing was wrong.

TIA
Michael
