## Rainlendar 2.11 BETA build 125

Posted by Rainy - 2012/10/14 05:18

---

Build 124 can be downloaded from here:

Windows (32-bit): Rainlendar-2.11.b125-32bit.zip  
Windows (64-bit): Rainlendar-2.11.b125-64bit.zip  
Linux TAR (32-bit): Rainlendar-2.11.b125-i386.tar.bz2  
Linux DEB (32-bit): rainlendar2-pro\_2.11.b125-1\_i386.deb  
Linux TAR (64-bit): Rainlendar-2.11.b125-amd64.tar.bz2  
Linux DEB (64-bit): rainlendar2-pro\_2.11.b125-1\_amd64.deb  
Mac OS X (Intel): Rainlendar-2.11.b125.dmg

MD5SUMS-b125

The widget addon: Shadow4-Widgets.r2skin-addon

This is beta version! It has not been tested.

Changes:

- o The images in the about dialog didn't work if the program path contained foreign characters.
- o Improved the error handling in the Toodele plugin.
- o Added manager list icons for task status and priority.
- o It's possible to use special filters (e.g. "category:important") in the manager's search field.
- o Clicking the category, status or priority in the manager will automatically set the filter for it.
- o Delete key in the manager deleted the selected events also when the focus was not in the list.
- o The tooltip in the manager showed content from the incorrect row.
- o Improved the performance when there are a lot of events visible in the calendar.
- o Manager didn't check the end date for the recurring events and tasks.
- o The application was not closed down properly on Mac.
- o Size of the new calendar wizard depends on the font size.
- o Setting recurring task completed did not always set the alarm and completed date correctly.
- o Improved the CalDAV support. It should now work with Yahoo!, iCloud and Baikal.

=====

- o It's possible to use special filters (e.g. "category:important") in the manager's search field.
  - o Clicking the category, status or priority in the manager will automatically set the filter for it.
- I like the way this is done, your software rocks again.

Still I think sorting is a necessity, as it was possible in the old manager. E.g. without sorting, I cannot have a quick overview about which categories I have used. In the old manager, it was possible to sort by category and then quickly scroll through the list in order to get an idea.

Others may want to sort by subject. Sorting is a must :) Sorting by all kinds of possible fields...

Can you explain what the buttons "Show original" "Show current" exactly mean?

"Show original" -> "Show all"?

"Show current" -> Hmm, here it also shows events from the past, starting from 2011. "Show current year"?

EDIT: Hmmm, aha, "Show original" shows the first appearance of recurring events...

Thx

Hi,  
I update the appl from 2.09 to this beta version  
I update also the skin to ChromophoreLou v1.2.18

---

I can't not change permanently the background (from blu) to red  
Some suggestion ?  
Thankssssss

---

Hi,  
I think there might be a bug with the tray icon, because even if I select that rainlendar should not show a tray icon there is one visible.  
Kind regards  
David

---

@capturable, sorting per columns is a bit problematic since the list doesn't have any headers which you could easily click and sort by that column. One option could be to add a toolbar button with dropdown menu for the sorting but I'm not sure how usable that would be. Any other ideas?

@evvivame, does the same happen also with the build in Chromophore skin?

@senior\_spielbergo, what operating system and language you are using? I tried in Windows XP and everything seemed to work fine.

---

---

I am using rainlendar in English on Arch Linux. The option "Show tray icon" is deactivated in the advanced settings tab.

Edit: Maybe I should add, that I am using Gnome3.

To be honest: No. But I think a dropdown beside the search field wouldn't be wrong.

I am using rainlendar in English on Arch Linux. The option "Show tray icon" is deactivated in the advanced settings tab.

Edit: Maybe I should add, that I am using Gnome3.

I don't have any Linux installation available which uses Gnome3 but I tried this with Unity on Ubuntu and the normal tray icon works fine but the appindicator version does not get removed even if it's disabled from the settings. I don't know if

---

that's a bug in Unity or if there is something I can do in Rainlendar to make the icon go away. Restarting the application at least removes the icon.

---

Thanks for the help. I did not know that the addindicator was producing this icon. Sorry for this stupid question. If I would have looked properly on all the options I could have fixed this on my own.  
Thanks again!

Hi guys

I would like to inform you about an issue is going to come out when I try to search by a Manager option (see attached image). The crash happens just only if I search the tasks not the events.

I suppose it is a bug :(

Can someone confirm it?

Have a nice day

Giampaolo

Program: Rainlendar Pro BETA Versione 2.11 (b125) 32 bit

S.O.: Windows 7 PRO sp1

EDIT: The a.m issue does not appear using Rainlendar 2.11 BETA build 124 :ohmy:

<http://www.rainlendar.net/cms/images/fbfiles/images/RainlendarManagerTasks.jpg>

It works fine for me and I have the same configuration. It happens always?

Searching on Google, it gives: (c0000417) STATUS\_INVALID\_CRUNTIME\_PARAMETER - An invalid parameter was passed to a C runtime function, But this is weird, because (at least) it works for me.

=====

## Re:Rainlendar 2.11 BETA build 125

Posted by anoob - 2012/10/26 04:33

---

Found a logical issue:

Example:

If there is one thing occurred in the fourth week of each month, Tuesday,  
(like, 2012-10-23, the fourth week of October, Tuesday),

so I setting it like the attached image,

but you can see it next trigger is on 2012-11-27 (November fifth week, Tuesday)

<http://cdn0.qo000.com/img/3/22744-2.png>

=====

## Re:Rainlendar 2.11 BETA build 125

---

---

But it does what it promises: The 4th tuesday in November is the 27th.

Thanks your reply. Yes, it does what it promises.

But like my say previously:  
The Tuesday I want is in the 4th week of each month,  
not the 4th Tuesday of each month.

not the 4th Tuesday of each month.

I think that's not possible using the basic tools, because, even you said so, isn't well defined. It could be the 3rd or 4th Tuesday, and the week number isn't useful. These kind of events aren't achievable using the default iCalendar format. The format goes upward (weekday -> week -> month -> year) and your event is going downward (week -> weekday). One solution could be (if the event is only for Rainlendar, although you can move them to another calendar to make it permanent) create an event using script, searching when is the 1st day of the month, move to the 4th week, and finally go back to the Tuesday.

I reuse a code I have to create such kind of event. You can copy these files to the program/script folder (C:\Program Files\Rainlendar2\scripts in my case). It could be used to match any other day and any other week, but it will have troubles on the first and last weeks.

[http://www.rainlendar.net/cms/images/fbfiles/files/Tuesday\\_of\\_4th\\_week.zip](http://www.rainlendar.net/cms/images/fbfiles/files/Tuesday_of_4th_week.zip)

Jorge\_Luis, thanks your reply.

I know that's not possible currently,  
but it does have that kind of demand (events), so I raised,  
and hope the future build can add a option for that.

The a.m. issue happens always with Rainlendar 2.11 BETA build 125 version.  
Furthermore the issue happens both on PC XP PRO sp3 and Windows 7 PRO sp1

## Re:Rainlendar 2.11 BETA build 125

Posted by spimps - 2012/10/30 07:42

Loss of Ctrl+Enter shortcut to "ok" button when creating Event and ToDo.

I'm not sure when this changed, but I have a computer running 2.10 Build 120 which works. I have another running 2.11 Buld 125. I suspect it has something to do with the UI changes in Options and Manager menu?

Sorry if this has been mentioned before, but I've just meaning to bring this for a while now...

---

## Re:Rainlendar 2.11 BETA build 125

Posted by capturable - 2012/10/31 04:12

Manager UI is still seriously flawed.

- Start manager, "Show original"
- Multiselect events with shift+click, Change fields (I chose Category).
- After confirmation of "do you really want...", try to scroll up/down in the manager. Try to select stuff. Try to close that window...

...forget it, best is a restart of Rainlendar2.

---

## Re:Rainlendar 2.11 BETA build 125

Posted by Rainy - 2012/10/31 10:38

@kana48: Can you provide the crash dump for the manager issue? I'm not able to reproduce it here so it's probably related to one of the tasks you have in your list.

---

...forget it, best is a restart of Rainlendar2.

---

So, what exactly happens? I tried to change the category for multiple events and everything worked fine...

Well, scrolling by dragging the scrollbar was impossible, closing manager via "x" wasn't possible (nothing happened)... But the window was functional, e.g. it was possible to show entries by double click. I may report again, don't waste your time on that. Now, on a different computer, I also cannot reproduce. Both are Win7x64 with Rainlendar x64.

I'm still trying to get used to the new Manager UI. The filter functions are quite useful and the "change fields" function is very nice, indeed.

I would suggest, to give access to the calendar field, too. So it would be possible to bulk-change the calendar(s), too.

There's no need to add that option. It already exists.

In the manager, select the events/tasks you want to move and click on "Move To" in the toolbar (beside "Change Fields").

Sorry for the delay to response.-

I have followed your suggestion. You may download the crash dump file from this link due to it is too much big for attaching.

The issue is present with a Rainlendar 2.11 BETA build 126 too.

The dump file has been created using only a command line ProcDump.exe -e -t Rainlendar2.exe from "Command Prompt".

I hope it is enough to understand the reason of the issue.

Thanks a lot for your kind attention and have a nice day.

Giampaolo
