## Auto changing icon location on calendar window

Posted by Onweerwolf - 2012/10/17 18:14

---

Hi there,

I've been busy modifying a skin to suit my own needs. Here's an example:

<http://i.imgur.com/VgawS.png>

As you can see on the 8th and 11th of November there are two different icons over each other. This means on these days I have events from two different categories.

My question is; would it be possible to have one of the icons switch to a different align variable (and offset) if it is not first icon on a specific day. In other words, I would like to have the music note from the 8th of November be aligned on top right, so that top left is reserved only for the green pin. And I would like to have Rainlendar do this automatically.

If possible, can someone tell me how I need to do this?

Thank you!

Whoops, just figured this out. Seems I had to use the priority variable. It wasn't clear to me from the help description that this would make the icons relocate.

Follow up question though, in case of three different icons they are all on the same line. The first in the example above, the second immediately right to it and the third immediately right to the second. This means that the third is partly outside the grid of the date square. Is it possible to have the third automatically move below the first (and a fourth below the second)? If so where can I set this?

If I remember correctly there is a similar question:

[http://www.rainlendar.net/cms/index.php?option=com\\_kunena&Itemid=42&func=view&id=14379&catid=3#14379](http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&id=14379&catid=3#14379)  
maybe that can help you.

That doesn't really help me as that thread only offers a description of how someone tried (and failed) to get this done with an old skin type. There are no .ini files anymore, just .xml files.

---

Ooh, But Rainlendar2 will align location of icons automatically.  
Have you setting the "offset" item for categories in elements.xml ?  
The default setting is: offset="-2,-2", and don't suggest to change that values.

I'm afraid there is no elements.xml file in my skin. :(

---

Well, can you attach your skin file? Or send it to me(see my signature image).

Here it is.

edit: Well apparently not. I tried twice, first I couldn't upload a .r2skin file and the second time as a .zip it was too large. :')

edit2: Ok, mailed it to you. :)

I had received your skin file, but after test, I can not solve your question.  
See (18, Oct) the third icon is still outside the grid of the date square.  
Hope someone can offer the solved way.

edit: your common.xml file is the elements.xml file i say.

The icons are wrapped automatically if they would be drawn outside the the day rectangle. Unfortunately there is no possibility to define the size of the rectangle so in your case it goes also over the gaps between the days. I'll see if it would be possible to do something about this.

That would be excellent. It's not a really big deal, but it would be aesthetically pleasing of course.

Since I just did an update to the new version I was wondering if the above was fixed, or discarded as impossible or still on the list. No problem in the latter two cases of course, but I was just wondering if I could toggle a new option or anything, I looked but did not find.

It's still in the backlog waiting for implementation so the problem is not fixed yet.
